We’re all cancer researchers.

Cancer Cell Biology & Biochemistry

Present:

“Mitochondria, Metabolism and Cellular Decisions: Entwined in Health and Disease”

Jared Rutter, PhD
Professor, Department of Biochemistry, School of Medicine, Howard Hughes Medical Institute, University of Utah

September 22, 2016
9:00 am – 10:00 am
Basic Science Building
Room 376

Rutter studies how cells sense and detect energy needs for growth.
Understanding the energy-sensing pathways in cells is important in cancer research because these pathways are often overactive in cancer and a good target for new chemotherapy treatments.
