HEAD AND NECK CANCER SYMPOSIUM FOR THE ADVANCED PRACTITIONER...*At a Glance*

COURSE HIGHLIGHTS

This course highlights a multidisciplinary approach to the treatment and rehabilitation of the head and neck cancer patient. Conservation options and surgical intervention strategies will be discussed as well as post treatment quality of life issues. This course underscores the contributions of ancillary services in overall patient outcomes. Particular attention will be paid to total laryngectomy and the latest advances in evidence based practice. Chronic problems related to tracheoesophageal puncture will be explored in light of new technologic and procedural advancements. To integrate course concepts, attendees will submit cases and participate in presentation and discussion.

COURSE OBJECTIVES

After completion, participants will be able to:

Specify

- One indication and one contraindication for laryngeal tumor organ preservation treatment.
- Two dental complications resulting from head and neck cancer treatment(s).
- Two advantages and two disadvantages of a primary tracheoesophageal puncture.
- Two clinical observations that could indicate poor thyroid function in the laryngectomized patient.
- Two reasons and two possible solutions for chronic leakage around a voice prosthesis.
- Three benefits of a heat moisture exchange (HME) system

Explain

- Effects of radiation on swallowing function.
- Why trismus patients need passive range of motion exercise.
- The components of Complete Decongestive Therapy for lymphedema treatment.
- One effect of healthcare restraints as it relates to patient treatment and quality care.

ACCREDITATION

This program is offered at 1.5 ASHA CEUs
(Advanced level; Professional area)

Space is limited - Register by 8.31.09 for a discount!

FRIDAY
