FAST FACTS AND CONCEPTS #006 PDF

Author(s): Bruce Ambuel PhD and David E Weissman MD

Case Scenario: You are caring for a previously healthy 52 year old man with a new problem of abdominal pain. After conservative treatments fail, a diagnostic abdominal CT scan is done showing a focal mass with ulceration in the body of the stomach and numerous (more than 10) densities in the liver compatible with liver metastases. The radiologist feels that the findings are absolutely typical of metastatic stomach cancer. How do you prepare to discuss these test results with the patient?

Preparing to Delivery Bad News

1. Create an appropriate physical setting: a quiet, comfortable room, turn off beeper, check personal appearance, have participants – including yourself – sitting down.
2. Determine who should be present. Ask the patient who they want to participate and clarify their relationships to the patient. Decide if you want others present (e.g. nurse, consultant, chaplain, social worker) and obtain patient/family permission.
3. Think through your goals for the meeting as well as possible goals of the patient.
4. Make sure you know basic information about the patient’s disease: prognosis, treatment options, next steps.
5. Special circumstances: If the patient lacks decision-making capacity (e.g. developmentally delayed, demented, delirious, etc.), make sure the legal decision-maker is present.
6. Special circumstances: If the patient or family do not speak English, obtain a skilled medical interpreter. Use phone translation services if necessary. See also Fast Fact #154.

Precepting self-reflection Residents will invariably have strong emotions when they have to give bad news. This emotional response can be heightened by various factors—a young patient, an unexpected diagnosis, a patient with whom the physician has a long-standing relationship, etc. Preceptors need to support the resident. Key teaching points:

1. Residents may not spontaneously discuss their own emotional reaction with a preceptor, therefore preceptors need to introduce this topic. “This is a really hard case, how are you doing?”
2. Physicians often have strong emotional reactions when a patient encounters bad news. Normalize the experience for the resident. “It’s normal to have strong feelings”.
3. Three methods for coping with these feelings are: Identify your feelings (anger, sadness, fear, guilt); Talk with a colleague; Keep a personal journal.
4. Role play the discussion with the resident before you go into the room; ask them to reflect on how it “feels”...what is hard...what is easy. Encourage continued self-reflection.
