

Job Shadow/Observer Experience: Health Requirements

Froedtert Health requires **documented proof** of the following health requirements:

- **COVID Vaccination Series:**
 - Documented proof of full COVID Vaccination Series, include Booster, if received
 - Accepted forms of documentation include one of the following:
 - Documentation from Wisconsin Immunization Registry (WIR)
 - Signed letter from the healthcare provider who administered the vaccine that identifies the manufacturer, lot number and date of administration
 - COVID Vaccination Card is not an acceptable proof of vaccination status
- **Influenza Vaccine:**
 - Documented proof of 1 (one) dose of Influenza vaccine if observation occurs during influenza season (*approximately* September 1 through March 30 or based on current CDC recommendations)
- **MMR (Measles, Mumps, Rubella):**
 - Documented proof of 2 (two) doses of **MMR** vaccine with 1st dose after the first birthday, and 2nd dose at least 28 days after
 - Or medical documentation of 1 (one) quadrivalent measles, mumps, rubella, and varicella (MMRV) vaccine
 - Or documented proof of positive MMR titer (blood test)
- **Tuberculosis (TB) Surveillance** (Provide documentation of **ONE** of the following):
 - Negative TB Skin Test (dated within 12 months of observation start date)
 - Negative Quantiferon Gold Blood (IGRA) Test (dated within 12 months of observation start date)
 - Chest X-ray Negative for TB (dated within 6 months of observation start date)
 - Note: check with your healthcare provider for current recommendations regarding COVID mRNA vaccine administration and TB Test Surveillance
- ***See below for resources if you need to obtain a TB Skin Test***

To obtain Immunization Records, you may check with:

- Your parents
- Primary Care Provider
- Epic MyChart
- Cerner Patient Solutions
- Local Health Department if immunizations provided there
- Wisconsin Immunization Registry: <https://www.dhfwir.org/PR/logoff.do>

***Please note:

Froedtert Health requires DOCUMENTED PROOF of immunizations and TB Surveillance, not just dates.

If you require immunizations, the resources listed below for TB Skin Tests may also offer immunizations.

TB Skin Test Resources

The TB skin test, also called the Mantoux tuberculin skin test (TST) requires two visits with a health care provider. The TB skin test is performed by injecting a small amount of fluid (called tuberculin) into the skin on the lower part of the inner arm. The test is placed on the first visit. The healthcare provider “reads” the placement area on a second visit, 48 to 72 hours after the test is placed, to determine a positive or negative reaction. (Centers for Disease Control, 2016. Retrieved from <https://www.cdc.gov/tb/topic/testing/tbtesttypes.htm>)

You may contact your primary care provider to complete this test or other options are listed below.
