Our project idea was to form a local partnership with the International Learning Program (ILP) to provide medical trainees an opportunity for community engagement while also improving health literacy among refugees.

**RESULTS**

Refugee Health Education Night for Trainees held in January 2019

- In a pre-survey, <5% of trainees report receiving adequate dedicated class time covering medical issues unique to immigrant and refugee populations.

  “I feel confident in my ability to provide culturally sensitive care to refugees.”

After curriculum

Refugee Health Mock Medical Visit:

- Appointment check-in
- Medical history paperwork
- Triage and vital signs
- Medical history and exam

**DISCUSSION**

- Due to the unique experiences of refugees, conventional medical education may not adequately prepare trainees to provide culturally sensitive care to this population
- Population-specific curriculum can improve trainee understanding and comfort in providing medical care to cultures different than their own
- Mock Medical Clinics are meaningful experiences for both trainees and refugees:
  - They provide trainees with an opportunity to practice cross-cultural care
  - They help refugees become familiar with the US healthcare system

**ENTREPRENEURIAL MINDSET**

We were Curious about how comfortable trainees feel in providing medical care to refugees, and about how we could use our skills to make refugees feel more at home here in the US.

We created a Connection and Collaboration with the ILP by devising a health literacy curriculum that our trainees are delivering to their refugee learners to both improve cultural humility among trainees and familiarize the refugees with the US healthcare system.

We Created value by devising a Mock Clinic experience that we plan to repeat for refugee learners as part of their resettlement process and presenting a curriculum for medical trainees to help them better understand their refugee patients.

We would like to thank the staff and students at the ILP and MCW medical students and residents for their partnership in this project and the Kern Institute for making our idea a reality.
