

Are you interested in helping scientists learn more about Type 1 diabetes?

Researchers at the Medical College of Wisconsin are studying the possible role of gut bacteria in type 1 diabetes. To do this, we want to study the effects of a probiotic supplement in otherwise healthy children and teens with a full sibling affected by type 1 diabetes.

We are looking for healthy children between the ages of 5 and 17 years who have a sibling with type 1 diabetes.

You will be compensated for your time

If you would like to find out more information, please contact research coordinators Joanna Kramer or Clare Bingham-Tyson at
