Learn more about REDCap Secure Data Storage

Overview

REDCap is a secure and customizable web-based database application used to collect and store research data from case report forms, surveys, or a combination of both. A REDCap project is quick to set up and flexible enough for any type of research (i.e. cross-sectional and longitudinal studies). REDCap supports calculated fields, branching logic, double data entry, data import and export to common stats packages, complete data logging, canned reports, and much more.

Hours: 24/7/365, minus times of upgrades or institutional outages

Common users of the facility: Researchers from CTSI affiliated institutions

Rate:
$300 one-time startup fee
$60/hour development time
