

MCW-Central Wisconsin Campus Occupational Health Services

Occupational Health Services available to MCW students (after 1st day of orientation)

Internal Occupational Health provides immunizations, titers, Tuberculosis Surveillance, Respirator fit testing, post-exposure evaluations and follow-ups. Post-exposure evaluations should be performed as soon as possible after the exposure.

Process:

1. Email Froedtert & MCW Internal Occupational Health (iohfroedtert@froedtert.com) from your MCW email account to request an order. Include your full name, DOB, requested service(s), and requested location (see options below).
2. F&MCW IOH will fax the order to the Occupational Health site and email it to your MCW email address.
3. After receiving the order, call the site to schedule your appointment (see contact information below).
4. Bring a copy of the order with you when you go to your appointment.
4. Results:
 - All results are sent directly to IOH Froedtert (iohfroedtert@froedtert.com).
 - You must submit a **Release of Information form** to Froedtert/MCW Occupational Health to be provided with your results. The form and directions are on the [MCW-CW Campus Student Information Brightspace site](#).
 - You are responsible for uploading your results to [Castlebranch](#).
 - The window to upload documents in Castlebranch opens **21 days before** the due date (until then you will not see an option to upload documentation.)

Respirator Fit Testing: submit the [Respirator Fit Test Full Medical Questionnaire](#) to [Froedtert & MCW Occupational Health](#) first for clearance, and then bring the completed form to your appointment.

Blood/Body Fluid Exposure Protocol

An exposure incident is defined as a possible transfer of blood or infectious body fluids from the source to another person. Exposures are caused by receiving a needle stick or a cut with a sharp object, a splash to your eyes, nose, or mouth, or to open areas on your skin.

1. If the student receives a percutaneous exposure (puncture of the skin) due to needle stick or contaminated sharp objects, they should wash the areas for 15 minutes with soap and water.
2. If the student receives a mucous membrane exposure (splash to the eyes, nose, or mouth), they should flush the area with water for 15 minutes.
3. If the student gets blood or body fluid on exposed, non-intact skin, they should wash the area with soap and water for 15 minutes.
4. The student should notify their supervisor immediately of the exposure.

Students who do not follow this procedure for treating and reporting an exposure are at increased risk of contracting a blood-borne disease (HIV, Hepatitis B or C) and may be responsible for their own medical bills.

Please contact Occupational Health at (414) 805-7997 or iohfroedtert@froedtert.com with any questions. If you have been exposed and have immediate questions about risks and the tests involved, call either Occupational Health during normal business hours or go to the **hosting institution's employee health department**. If the exposure occurs after hours or on the weekends, you should contact the Administrative Nursing Supervisor at the hospital campus where the exposure took place for assistance. For emergencies when the clinic is closed, contact Margaret Lampark, 414-314-2283 (pager). Students should use the Emergency Department as a last resort.
